

A 20x20 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some clusters and many empty spaces. The overall shape is roughly rectangular, with the dots concentrated more towards the center and edges. The pattern is not uniform, with some areas having a higher density of dots than others. The dots are small and black, set against a plain white background.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in 10 rows and 10 columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.

A 15x15 grid of 225 small clusters of black dots, each cluster representing a different number from 0 to 9. The clusters are arranged in a grid where the first four rows have 4 clusters per row, and the last three rows have 3 clusters per row. The clusters are formed by black dots on a white background, with some clusters having a small black dot in the top-left corner.
