

The image displays a 10x10 grid of 100 small clusters of black dots on a white background. Each cluster is a unique arrangement of dots, representing a different number from 0 to 99. The clusters are arranged in rows and columns, with the first row containing clusters for numbers 0-9 and the second row containing clusters for numbers 10-19, and so on. The clusters are arranged in a way that they are easy to distinguish from each other, and they are arranged in a way that they are easy to read.

The image displays a 10x10 grid of 100 small clusters of black dots. Each cluster represents a unique number from 0 to 99. The clusters are arranged in two groups of five rows each. The first group (rows 1-5) represents numbers 0-49, and the second group (rows 6-10) represents numbers 50-99. Each cluster is a unique arrangement of dots, often forming patterns that resemble the digits themselves. For example, the cluster for '0' is a small circle of dots, while the cluster for '1' is a single dot. The clusters for '50' and '51' are identical, both consisting of a single dot.
