

The figure consists of two rows of four diagrams each, illustrating the evolution of a 2D lattice of particles. The top row shows the initial state with 10 particles. The bottom row shows the state after one time step, with particles having moved and new particles appearing at the boundaries.

A 3x3 grid of dots. The top row has dots in the second, third, and fourth columns. The middle row has a dot in the second column. The bottom row has dots in the first and second columns.

A large grid of 100 rows and 100 columns of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some rows having more dots than others. The dots are small and black, and the background is white. The pattern is roughly rectangular, with the dots concentrated in the center and fewer dots towards the edges. The dots are arranged in a way that suggests a random or semi-random distribution, but with some underlying structure or pattern. The dots are of uniform size and color, and the grid is perfectly square. The dots are scattered across the entire grid, with some rows having no dots at all and some rows having many dots. The overall effect is a complex, abstract pattern of black dots on a white background.
