

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in a grid where the first column shows the first bit, the second column shows the second bit, and so on, up to the tenth column showing the tenth bit. The patterns are created by placing black dots on a white background, with the number of dots in each column corresponding to the binary value of that bit.
