

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a 10x10 sub-grid where a small black dot is placed in a specific position to represent a binary value (0 or 1). The patterns are arranged in a grid where the first column shows the first bit, the second column shows the second bit, and so on, up to the tenth column showing the tenth bit. The patterns are created by placing a small black dot in a specific position within a 10x10 sub-grid for each bit value of 1.
