

A 10x10 grid of 100 small clusters of black dots, each cluster representing a different number from 0 to 99. The clusters are arranged in a grid where the first column shows numbers 0-9, the second column shows 10-19, and so on, up to the tenth column showing 90-99. Each cluster is a unique arrangement of dots, with some numbers having a single dot and others having many dots in various patterns.

A 10x10 grid of 100 small dot patterns. Each pattern consists of 10 dots arranged in a 2x5 grid. The dots are either present (black) or absent (white), representing a binary digit (0 or 1). The patterns are arranged in 10 rows and 10 columns, with each row and column containing a unique set of patterns. The patterns are arranged in a way that they can be read as a 10x10 grid of binary digits, where each dot represents a bit in a 10-bit binary number.

A 3x3 grid of dots. The dots are located at the following positions (row, column): (1,1), (1,2), (1,3), (2,1), (2,3), (3,1), and (3,2). The center position (2,2) is empty.
