

This image displays a highly complex, fractal-like pattern of black dots on a white background. The pattern is composed of numerous small, interconnected clusters of dots, forming a larger, irregular shape. The dots are arranged in a way that suggests a hierarchical or self-similar structure, with smaller clusters nested within larger ones. The overall effect is a complex, textured surface that resembles a dense, abstract landscape or a complex network of points.

A 3x3 grid of dots. The top row has three dots. The middle row has two dots, with the rightmost position empty. The bottom row has two dots, with the leftmost position empty.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in 10 rows and 10 columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.
