

A 5x10 grid of 50 small clusters of black dots. Each cluster is a unique arrangement of dots, ranging from simple 2x2 squares to more complex, irregular shapes. The dots are small and black, set against a white background. The clusters are arranged in five rows and ten columns, with each cluster occupying a small, roughly square area within its grid cell.

A 7x10 grid of 70 small clusters of black dots, each forming a different pattern. The patterns are arranged in 7 rows and 10 columns. The first two columns contain small, simple patterns, while the remaining eight columns contain more complex, larger patterns. The patterns vary in size, shape, and complexity, ranging from a single dot to a 3x3 grid of dots.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.

A 4x10 grid of 40 small clusters of black dots. Each cluster is a unique arrangement of dots, creating a variety of abstract shapes and patterns. The dots are small and black, set against a white background. The clusters are arranged in four rows and ten columns, with each cluster occupying a distinct rectangular area within its row and column.
