

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid that is 10 units wide and 10 units high. Each pattern is a small cluster of dots, with the number of dots and their positions varying according to the binary string it represents. The patterns are arranged in a grid that is 10 units wide and 10 units high. Each pattern is a small cluster of dots, with the number of dots and their positions varying according to the binary string it represents.

A 3x3 grid of dots. The top row has dots in the second, third, and fourth positions. The middle row has dots in the second and fourth positions. The bottom row has dots in the first and second positions.
