

The image displays a 100x100 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, suggesting a complex, non-random distribution. The pattern is dense in some areas and sparse in others, with a general trend of increasing density towards the bottom right corner. The dots are arranged in a way that suggests a complex, non-random distribution, possibly representing a specific data set or a stylized representation of a natural phenomenon.

The image displays a 10x10 grid of black dots on a white background. The dots are arranged in a pattern that suggests a banded structure, with higher density along the main diagonal and some off-diagonal elements, particularly in the lower-left and upper-right quadrants. This visual representation likely corresponds to the matrix A described in the text, which is a sparse matrix with a specific banded structure.

• • •

A 3x3 grid of dots. The top row has two dots, the middle row has three dots, and the bottom row has two dots. The dot at the top-right position (row 1, column 3) is missing.
