The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a 10x10 grid of dots, where each dot is either present (1) or absent (0). The patterns are arranged in 10 rows and 10 columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a 10-bit binary counter, where each bit corresponds to a specific dot position in the 10x10 grid. The patterns are arranged in a way that each row and column contains a unique set of patterns, representing all possible combinations of the 10 bits.
