

A large grid of 100 rows and 100 columns of dots, representing a 100x100 matrix. The dots are arranged in a pattern that suggests a sparse matrix, with many empty cells and some filled cells. The pattern of dots is complex and non-uniform, with some rows having more dots than others. The dots are small black circles on a white background.

A 20x20 grid of black dots on a white background. The dots are arranged in a sparse, abstract pattern, with some rows having more dots than others. The pattern is roughly rectangular, with a few dots scattered outside the main cluster. The dots are small and black, and the background is white. The overall shape is irregular, with some rows being more densely populated than others. The dots are arranged in a way that suggests a random or semi-random distribution, but with some underlying structure. The pattern is centered within the 20x20 grid, with a few dots extending towards the edges. The dots are of uniform size and color, and the spacing between them varies. The pattern is a single, continuous shape, with no gaps or breaks. The dots are arranged in a way that creates a sense of depth and dimension, with some dots appearing closer to the viewer than others. The pattern is a complex, multi-layered structure, with many small details and features. The dots are arranged in a way that suggests a hidden message or a secret code, but the meaning is not clear. The pattern is a beautiful, intricate design, and it is a testament to the power of simple shapes to create a complex and meaningful image.
