

A 20x20 grid of black dots on a white background. The dots are arranged in a sparse, abstract pattern, with some clusters and many empty spaces. The pattern is roughly rectangular, with the dots concentrated in the central and lower-right areas, and fewer dots in the upper-left and lower-left corners. The dots are small and black, and the grid is composed of 20 rows and 20 columns of dots.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in a grid where the first column represents the first binary digit, the second column the second, and so on, up to the tenth column representing the tenth digit. Each row represents a unique 10-bit binary number from 0000000000 to 1000000000.

Figure 1 shows three dot patterns labeled A, B, and C. Pattern A is a 4x4 grid with 10 dots. Pattern B is a 3x3 grid with 8 dots. Pattern C is a 3x3 grid with 7 dots.

A 3x3 grid of dots. The top row has three dots. The middle row has two dots, with the rightmost position empty. The bottom row has two dots, with the rightmost position empty.
