

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in 10 rows and 10 columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.

Figure 1 displays a sequence of 20 small plots arranged in two rows of ten, illustrating the evolution of a 5x5 grid of points. The top row shows the initial state and the first 9 steps of evolution. The bottom row shows the next 9 steps, including the final state where the points have formed a complex, interconnected pattern.

A 3x3 grid of dots. The top row has three dots. The middle row has two dots, with the rightmost position empty. The bottom row has two dots, with the leftmost position empty.
