

A 5x10 grid of 50 small clusters of black dots, each forming a different abstract pattern. The patterns vary in complexity, from simple pairs of dots to more intricate arrangements resembling letters or symbols.

Figure 1 consists of two scatter plots side-by-side. The left plot is titled '1990s' and the right plot is titled '2000s'. Both plots have 'Number of children in the household' on the x-axis and 'Number of children in the family' on the y-axis. The x-axis ranges from 0 to 10, and the y-axis ranges from 0 to 10. In the 1990s plot, there are approximately 15 data points, mostly clustered between 1 and 5 children in the household and 1 and 5 children in the family. In the 2000s plot, there are approximately 15 data points, with a wider distribution, including points at 6, 7, 8, and 9 children in the household, and 6, 7, 8, and 9 children in the family. The overall trend in both plots is a positive correlation, with the 2000s plot showing a steeper slope.
