

[illegible]

• •

A 7x10 grid of 70 small clusters of black dots. Each cluster is a unique arrangement of dots, creating a variety of abstract shapes. Some shapes resemble letters, while others are more geometric or organic. The dots are small and black, set against a white background.

• •

A 6x10 grid of 60 small, irregularly shaped black clusters of dots, resembling a noisy or corrupted version of a 6x10 grid of characters. The clusters are arranged in 6 rows and 10 columns, with varying degrees of noise and distortion.

The image displays a 100x100 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, suggesting a complex, non-random structure. The dots are organized into several distinct groups or clusters, each corresponding to a specific row or column of the grid. The overall appearance is that of a large, empty matrix with scattered data points, possibly representing a sparse matrix or a visual encoding of text.
