

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in a grid where the first column shows the first bit, the second column shows the second bit, and so on, up to the tenth column showing the tenth bit. The patterns are created by placing black dots on a white background, with the number of dots in each column corresponding to the binary value of that bit.

A 5x10 grid of 50 small clusters of black dots, each representing a different number from 0 to 49. The clusters are arranged in five rows of ten. The first row shows numbers 0-9, the second row 10-19, the third row 20-29, the fourth row 30-39, and the fifth row 40-49. Each cluster is a unique arrangement of dots, with some numbers having a single dot and others having up to ten dots.

The image shows four distinct dot patterns arranged horizontally. The first pattern consists of 5 dots arranged in a cross shape. The second pattern consists of 6 dots arranged in a 2x3 grid. The third pattern consists of 7 dots arranged in a 3x3 grid with the center dot missing. The fourth pattern consists of 8 dots arranged in a 3x3 grid with the center and bottom-center dots missing.

A 3x3 grid of dots. The dots are located at the following positions (row, column): (1,1), (1,2), (1,3), (2,1), (2,2), (2,3), (3,1), (3,2), (3,3). The dots are arranged in a sparse pattern, with some cells empty.
