

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are created by placing black dots on a white background, with the number of dots in each row and column corresponding to the binary value of the digit.

A 4x10 grid of 40 small clusters of black dots. Each cluster represents a different pattern of dot distribution. The patterns vary in the number of dots (from 2 to 10) and their arrangement (linear, clustered, diagonal, etc.).
