

The image displays a 20x20 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, suggesting a complex, non-random structure. The pattern is denser in some areas and sparser in others, with a notable concentration of dots in the lower right quadrant. The overall appearance is that of a stylized image or a specific data set represented by the distribution of dots.

A 5x10 grid of 50 small clusters of black dots, each cluster representing a different character or symbol from a non-Latin alphabet. The clusters are arranged in five rows and ten columns. Each cluster is a unique pattern of dots, some forming simple shapes like lines or curves, while others are more complex, resembling stylized letters or symbols. The dots are small and black, set against a white background.

Figure 1 displays a 2x10 grid of dot patterns representing the digits 0-9. The top row shows digits 0-9, and the bottom row shows digits 0-9. Each digit is represented by a unique arrangement of black dots on a white background.
