

This image displays a 100x100 grid of Braille characters, representing a multiplication table. The grid is organized into 100 rows and 100 columns. Each cell in the grid contains a Braille character that represents the product of the row and column numbers. The Braille characters are arranged in a way that is visually appealing and easy to read, with the products of the row and column numbers being clearly visible. The grid is a visual representation of the multiplication table, where each cell contains the product of the row and column numbers in Braille notation.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.
