

A large grid of 100 rows and 100 columns of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some rows having more dots than others. The dots are small and black, and the background is white. The pattern is dense in some areas and sparse in others, creating a complex, abstract visual structure.

[illegible]

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.

The figure shows four 5x5 dot patterns representing the digits 1, 2, 3, and 4. Each pattern is formed by black dots on a white background.

- Digit 1:** A vertical column of dots in the second column from the left.
- Digit 2:** A shape resembling a '2' formed by dots in the second, third, and fourth columns.
- Digit 3:** A shape resembling a '3' formed by dots in the second, third, and fourth columns.
- Digit 4:** A shape resembling a '4' formed by dots in the second, third, and fourth columns.

A 6x10 grid of 60 small clusters of black dots. Each cluster is a unique arrangement of dots, creating a variety of abstract shapes and patterns. The dots are small and black, set against a white background. The clusters vary in size, from a few dots to a larger group of about 15 dots. The overall effect is a dense, organized display of randomness or a specific code.
