

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in a grid where the first column represents the first digit, the second column the second digit, and so on, up to the tenth column representing the tenth digit. Each row represents a unique 10-bit binary number from 0000000000 to 1000000000.

A 5x10 grid of 50 small clusters of black dots, each forming a different abstract pattern. The patterns vary in complexity, from simple shapes to more intricate, interconnected forms.

A 4x10 grid of 40 small clusters of black dots, each forming a different abstract pattern. The patterns vary in complexity, from simple pairs to larger, more intricate shapes.

A 5x10 grid of 50 small clusters of black dots. Each cluster represents a different pattern of dot distribution, ranging from a single dot to a 5x5 square. The patterns are arranged in a grid that is 5 rows high and 10 columns wide. The first row contains 10 clusters, the second row contains 10 clusters, the third row contains 10 clusters, the fourth row contains 10 clusters, and the fifth row contains 10 clusters. The patterns are arranged in a grid that is 5 rows high and 10 columns wide. The first row contains 10 clusters, the second row contains 10 clusters, the third row contains 10 clusters, the fourth row contains 10 clusters, and the fifth row contains 10 clusters.

The figure shows four 5x5 dot patterns arranged horizontally. The first pattern represents the digit '1', the second '2', the third '3', and the fourth '4'. Each pattern is composed of black dots on a white background.
