

A 20x20 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some clusters and many empty spaces. The overall shape is roughly rectangular, with the dots concentrated more towards the center and edges. The pattern is not uniform, with some areas having a higher density of dots than others. The dots are small and black, and the background is white. The grid is 20 units wide and 20 units high.

A 3x3 grid of dots. The top row has two dots in the first and second positions. The middle row has one dot in the first position. The bottom row has two dots in the first and second positions. The dot in the top-right position is missing.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s), arranged in a 2x5 grid of dots. The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.
