

[illegible]

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The first row and column serve as headers, with the first column containing the binary digits 0000000000 and the first row containing the binary digits 0000000000. The remaining 99 patterns are arranged in a grid where each pattern is a unique combination of the 10 binary digits, representing all possible combinations of 10 bits (2^10 = 1024 total combinations, minus the header row and column).

A 3x3 grid of dots. The dots are arranged in three rows and three columns. The bottom-left dot is missing, leaving 8 dots in total.
