

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of 10 binary digits (0s and 1s). The patterns are arranged in a 10x10 grid, with each row and column containing 10 distinct patterns. The patterns are created by placing black dots on a white background, with the number of dots in each of the 10 positions corresponding to the binary value of that digit. The patterns are arranged in a 10x10 grid, with each row and column containing 10 distinct patterns. The patterns are created by placing black dots on a white background, with the number of dots in each of the 10 positions corresponding to the binary value of that digit.

A 20x20 grid of black dots on a white background. The dots are arranged in a sparse, irregular pattern, forming a stylized, abstract representation of a face or a similar figure. The pattern is composed of small, solid black circles of uniform size, arranged in a way that suggests a central vertical axis and symmetrical features on either side.
