

The image displays a 15x15 grid of black dots on a white background. The dots are arranged in a pattern that suggests a banded or block-like structure, with higher density of dots along the main diagonal and some off-diagonal elements. The overall appearance is that of a sparse matrix visualization, where each dot represents a non-zero entry in the matrix. The pattern is symmetric about the main diagonal, indicating a symmetric matrix. There are several distinct blocks of dots, suggesting a block-matrix structure. The density of dots varies across the grid, with the highest concentration along the main diagonal and some off-diagonal blocks.

A 3x3 grid of dots. The top row has three dots. The middle row has two dots, with the rightmost position empty. The bottom row has two dots, with the rightmost position empty.
