

The image displays a 10x10 grid of 100 small dot patterns, each representing a unique 10-bit binary code. The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are composed of black dots on a white background, with the number of dots in each pattern corresponding to the number of '1's in the binary code it represents. The patterns are arranged in a way that allows for easy identification of the binary code for each pattern, with the number of dots in each pattern corresponding to the number of '1's in the binary code it represents.

The image displays a 10x10 grid of black dots on a white background. The dots are arranged in a pattern that suggests a banded or block-like structure, with higher density along the main diagonal and some off-diagonal elements. The overall appearance is that of a sparse matrix visualization, where the positions of the dots represent non-zero entries in a matrix.

A large grid of 100 rows and 100 columns of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some rows having more dots than others. The dots are small and black, and the background is white. The pattern is dense in some areas and sparse in others, creating a complex, abstract visual structure.

The figure consists of 10 diagrams arranged in two rows of five. Each diagram shows a pattern of black dots on a grid. The pattern starts as a small cluster of dots in the first diagram and grows into a large, complex shape resembling a stylized 'E' or a comb in the tenth diagram. The growth is primarily horizontal, with vertical extensions at the ends.

A 3x10 grid of dots representing a 30-letter alphabet. The first 26 letters are formed by unique patterns of dots, while the last four positions are empty.

A 3x3 grid of dots. The top row has two dots. The middle row has three dots. The bottom row has two dots, with the leftmost position being empty.
