

The image displays a 5x5 grid of 25 small dot patterns. Each pattern is a unique combination of 5 binary digits (0 or 1) arranged in a 5x5 grid. The patterns are arranged in rows and columns, with the first row starting with a single dot in the top-left position and the last row starting with two dots in the top-left and top-middle positions.

Figure 1 displays a sequence of 20 small plots arranged in two rows of 10, illustrating the evolution of a system over time. The top row shows a sequence of patterns starting from a single point and branching out. The bottom row shows a sequence of patterns starting from a single point and branching out in a different way. The patterns are composed of black dots on a white background.

A 4x10 grid of 40 small clusters of black dots. Each cluster represents a unique pattern of dot arrangement, ranging from a single dot to more complex geometric shapes like lines, squares, and crosses. The patterns are arranged in four rows of ten.

The image shows a 2x4 grid of dot patterns. The first row contains the digits 1, 2, 3, and 4. The second row contains the digits 1, 2, 3, and 4. Each digit is represented by a unique arrangement of black dots on a white background.
