

A 10x10 grid of 100 small dot patterns. Each pattern is a 5x5 arrangement of dots, where each dot is either present (black) or absent (white), representing a unique 10-bit binary code. The patterns are arranged in rows and columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are unique and cover all possible combinations of 10 bits.

A black and white dot pattern forming a grid of letters and symbols. The pattern is composed of small black dots arranged to form the shapes of various characters. The characters are arranged in a grid-like fashion, with some characters appearing more frequently than others. The overall effect is a dense, textured field of dots that vaguely suggests the layout of a keyboard or a list of characters.
