

The image displays a 10x10 grid of 10x10 sub-grids, totaling 100 rows and 100 columns of dots. Each sub-grid contains a unique pattern of dots, representing a 10x10 grid of 10x10 sub-grids. The patterns are arranged in a way that suggests a larger, more complex structure.

Figure 1 consists of six scatter plots arranged in a 2x3 grid. The top row represents the year 1990, and the bottom row represents the year 2000. Each plot shows the number of children per family (x-axis, 0 to 5) versus the number of families (y-axis, 0 to 10). The distributions are roughly bell-shaped, centered around 2 children per family.

A 10x10 grid of 100 small clusters of black dots, each cluster representing a different number from 0 to 99. The clusters are arranged in a grid where the first column shows numbers 0-9, the second column 10-19, and so on, up to the tenth column showing 90-99. Each cluster is a unique pattern of dots, with some numbers having a single dot and others having many dots in various arrangements.
