

A large grid of 100 rows and 100 columns of black dots on a white background. The dots are arranged in a sparse, irregular pattern, with some rows having more dots than others. The dots are small and black, and the background is white. The pattern is dense in some areas and sparse in others, creating a complex, abstract visual. The dots are arranged in a way that suggests a random distribution, but there are some subtle patterns and clusters that can be seen upon closer inspection. The overall effect is a textured, almost crystalline appearance.

Figure 1 consists of two scatter plots. The left plot, titled 'All children', shows a positive correlation between the number of children in the household (x-axis) and the number of children in the family (y-axis). The right plot, titled 'Only children', also shows a positive correlation, but with a steeper slope than the left plot. Both plots have data points represented by black dots.
