

The image displays a 10x10 grid of 100 small dot patterns. Each pattern consists of 10 dots arranged in a 2x5 grid, where the presence or absence of a dot represents a bit in a 10-bit binary code. The patterns are arranged in rows and columns, with each dot's position corresponding to a bit in the code. The patterns are arranged in a way that each row and column contains a unique set of bits, forming a binary code for each of the 100 possible combinations of 10 bits.

The figure consists of 10 small diagrams arranged in a single row. Each diagram shows a grid of dots, with some dots being black and others white. The pattern of black dots evolves from left to right, starting as a small cluster and growing into a larger, more complex shape. The diagrams are labeled 1 through 10, though the labels are not explicitly shown in the image.

The image displays a 5x10 grid of 50 small, abstract black-and-white patterns. Each pattern is a unique arrangement of black dots on a white background, forming shapes that resemble stylized letters or symbols. The patterns are organized into five rows and ten columns. The first row contains 10 patterns, the second row contains 10 patterns, the third row contains 10 patterns, the fourth row contains 10 patterns, and the fifth row contains 10 patterns. The patterns vary in complexity and style, with some being simple and others being more intricate.

A 5x10 grid of 50 small clusters of black dots. Each cluster is a unique arrangement of dots, creating a variety of abstract shapes and patterns. The dots are small and black, set against a white background. The patterns range from simple horizontal or vertical lines to more complex, interconnected shapes that resemble letters or symbols.

A 3x3 grid of dots. The top row has two dots in the first and second positions. The middle row has one dot in the first position. The bottom row has two dots in the first and second positions. The dot in the top-right position is missing.

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique visual representation of a 10-bit binary string. The patterns are arranged in 10 rows and 10 columns, with each row containing 10 patterns and each column containing 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string. The patterns are arranged in a grid where each row contains 10 patterns and each column contains 10 patterns. The patterns are generated by a random process, resulting in a diverse set of visual representations for each 10-bit binary string.

A 10x10 grid of 100 small, stylized human figures. Each figure is composed of black dots on a white background, forming a simple silhouette of a person with arms and legs. The figures are arranged in a regular grid pattern, with some figures appearing slightly larger or more distinct than others, creating a sense of depth and movement. The overall effect is a dense, textured field of human forms.

A 3x3 grid of dots. The top row has two dots, the middle row has two dots, and the bottom row has two dots. The dot in the top-right position is missing.
