

The image displays a 100x100 grid of dots. The dots are arranged in a pattern that suggests a banded structure, with higher density of dots along the main diagonal and some off-diagonal elements, typical of a discretized differential equation system. The dots are arranged in a pattern that suggests a banded structure, with higher density of dots along the main diagonal and some off-diagonal elements, typical of a discretized differential equation system.

A 3x3 grid of dots. The dots are located at the following positions (row, column): (1,1), (1,2), (1,3), (2,1), (2,2), (2,3), (3,1), (3,2), (3,3). The dots are arranged in a sparse pattern, with some cells empty.

The image displays a 10x10 grid of 100 cells. Each cell contains a unique pattern of black dots on a white background. The patterns vary significantly, ranging from single dots to complex, interconnected clusters. Some cells show vertical or horizontal alignments, while others form more intricate, non-linear shapes. The overall distribution of dots across the grid suggests a systematic exploration of different configurations or states.

A 4x10 grid of 40 small clusters of black dots, each forming a different abstract pattern. The patterns vary in complexity, from simple horizontal or vertical lines to more intricate, interconnected shapes.
