

The image displays a 20x20 grid of black dots on a white background. The dots are arranged in a pattern that suggests a sparse matrix, likely representing a discretized system. The distribution of dots is not uniform; it shows a higher density along the main diagonal and some off-diagonal elements, particularly in the lower-left and upper-right quadrants, which is characteristic of a banded matrix. The overall pattern is symmetric about the main diagonal, indicating a Hermitian or symmetric matrix. The dots are small and black, and the grid is perfectly square.

The image displays a 10x10 grid of 100 small clusters of black dots on a white background. Each cluster represents a unique number from 0 to 99. The clusters are arranged in rows, with the first row containing clusters for 0-9, the second row for 10-19, and so on, up to the tenth row for 90-99. The clusters are of varying sizes and shapes, reflecting the different dot patterns for each number. The patterns are reminiscent of a 10x10 grid of small clusters of black dots, where each cluster is a unique arrangement of dots representing a different number from 0 to 99. The clusters are arranged in rows, with the first row containing clusters for 0-9, the second row for 10-19, and so on, up to the tenth row for 90-99. The clusters are of varying sizes and shapes, reflecting the different dot patterns for each number.

A 3x3 grid of dots. The top row has dots in the second, third, and fourth columns. The middle row has a dot in the second column. The bottom row has dots in the first and second columns.
